

EatResponsible – Environmental Policy

EatResponsible is committed to minimize the Carbon footprint of our business activities.

Article 1 – Minimization of our Environmental Impact

Minimization of impacts is based on the following actions which we follow in all occasions:

- We take all feasible steps to work remotely when our client are further than 100 Km from our nearest location.
- We reviewing activities with major environmental impact semi-annually to control our targets are achievable and on track;
- We minimize physical supplies and rely on the Internet to deliver our services.
- We recycle or – if possible - re-use our office assets at all times.
- We limit paper consumption and use only FSC certified paper.

Article 2 – Objectives

EatResponsible objectives for the current year are

- Reduce the overall carbon footprint due to business travel by 10% with respect to the overall footprint past year;
- Reduce the overall paper consumption by 10% with respect to the overall paper consumption of past year.

We develop action plans to supplement each of our environmental policy objectives.

EatResponsible periodically reviews performance and publish these results on the EatResponsible website.
